

# MRXBOX-ECO5

## Revit Model Features

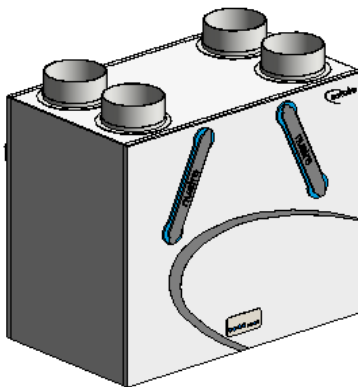

1. The model uses a type catalogue so all variants of the MRXBOX-ECO5 range can be inserted using the same .rfa file (see Read Me file attached for further info)

The mrxbox-eco5.rfa model attached includes the following options in the Model Properties category in the Properties window

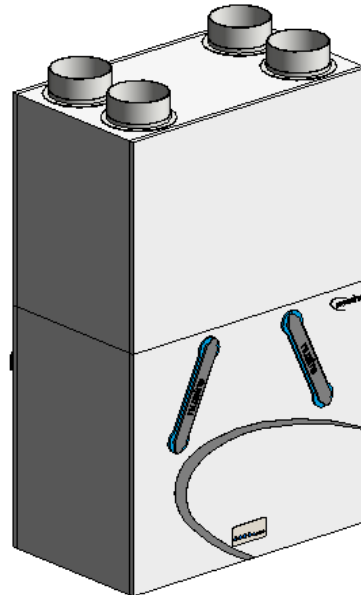

2. **'Add MRXBOX-SIL5 Silencer'** will add the MRXBOX-SIL5 attenuator but only when using the standard ECO5 or ECO5-OH models. The -1Z model houses an integral silencer therefore this option is not required with this model.

Add MRXBOXSIL5 Silencer ☐

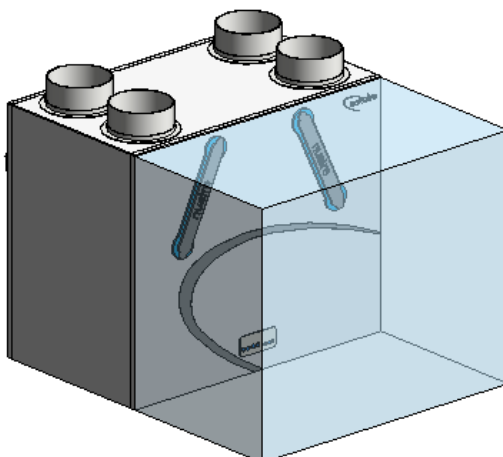

Add MRXBOXSIL5 Silencer ☒

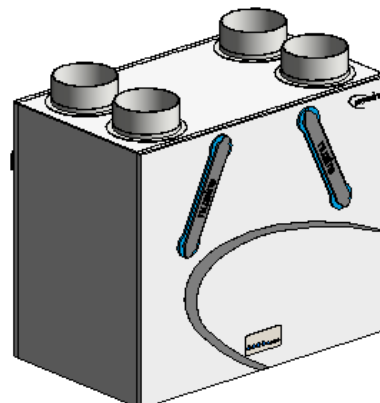

3. **'Show Access Clearance'** allows you to show or hide the access clearance transparent area of the model. This clearance area will still affect collision detection when turned off.

Show Access Clearance ☒

Show Access Clearance ☐

4. If the model is inserted into the project without using the correct procedure then you will be alerted via a red box and 'ERROR' wording around the model. The model code will also show this same message in the schedules. Please then refer to the additional 'Please Read Me' file packaged with this family for the correct insertion procedure.
